PART VIII

INDEX TO GENERA OF SPECIES-GROUP NAMES

INTRODUCTION

This section is straightforward and needs little introduction. The objectively valid names are shown in '**bold**', the objectively invalid names in 'light' and the unavailable names in '*italics*, and these differences are also reflected in the indentation level of the names. Generic names are shown without authorship, but this information is given in Part III. Keys to the higher classification are given for each genus. For example, **Acanthaeschna** is keyed as **Ani:Aes:Aes:Bra:Brachytronini**, which can be read as Suborder Anisoptera, Superfamily Aeshnoidea, Family Aeshnidae, Subfamily Brachytroninae, Tribe Brachytronini. The keys for the fossil genera are given as "Fossil", but some addition information about their placement may be found in Part III. Nominal species which are type-species are marked with a * if they are the type-species of the genus in which they are placed, or with a + if they are the type-species of a generic name which is in the synonymy of the genus in which they are placed.

ABBREVIATIONS

The following abbreviations are used in this section.

H .....Homonym
IOS .....Incorrect Original Spelling
ISS .....Incorrect Subsequent Spelling
JOS .....Junior Objective Synonym
MID .....Misidentification
NN .....Nomen Nudum
PD .....Pending Decision (by the ICZN)
PS .....Published in Synonymy

Acanthaeschna [Ani:Aes:Aes:Bra:Brachytronini]
* **victoria** Martin, 1901
- - - - *victoria* Selys, 1883, (NN)

Acanthagrion [Zyg:Coe:Coe:Ischnurinae]
ablutum Calvert, 1909
abunae Leonard, 1977

PART IX

INDEX TO BIBLIOGRAPHIC CITATIONS FOR SPECIES-GROUP NAMES

INTRODUCTION

This section is straightforward and needs little introduction. It consists of an index to all those publications which contain either original descriptions or selection of type specimens. For original descriptions the data is arranged into four columns, information on the type, status code, name and original genus and page citation. For type designations the first column is always blank and the status code is replaced by 'T'. The genus-group names used are those used in the original descriptions, not those in which the name is presently placed.

ABBREVIATIONS

The following abbreviations are used in this section.

H .....Homonym
IOS .....Incorrect Original Spelling
ISS .....Incorrect Subsequent Spelling
JOS .....Junior Objective Synonym
MID .....Misidentification
NN .....Nomen Nudum
PD .....Pending Decision (by the ICZN)
PS .....Published in Synonymy

PART X

BIBLIOGRAPHY

INTRODUCTION

This section is straightforward and needs little introduction. Abbreviations used in journal titles have been taken from the *World List of Scientific Periodicals* [b6481]. I have tried to provide the full names of the authors, and to give some information about where and when they were born and died, and what happened to their collections. This information has been taken from various sources, but the works of Gilbert, 1978 (*A Compendium of the Biographical Literature on Deceased Entomologists*) [b2525], Carpenter, 1945 & 1953 (*Bibliography of Biographies of Entomologists*) [b1266, b1267], Horn & Schenkling, 1928 (*Index Litteraturae Entomologicae, Serie I*) [b2864] and Derksen & Scheiding-Göllner, 1965 (*Index Litteraturae Entomologicae, Serie II*) [b1667] have been most helpful. In general papers with multiple authors are only listed under the senior author, but in cases where junior authors have published material which has nomenclatural implications (i.e. type-species selections), the paper is given a second entry.

Aagaard, Kaare;

b. 1947.

Aagaard, Kaare; Dolmen, Dag;
